

## 6.8 Enlargements

## 6.9 Similar Triangles (Theorem 13)

Two triangles are said to be '*similar*' if they have three common angles. The lengths of the sides can be different, but you will find that the ratios of the sides are proportional.

These triangles  $\triangle ABC$  and  $\triangle AB'C'$  are all '*similar*' to one another. [Prove it to yourself by measuring the lengths of the sides with a ruler. You will see that they are always proportional.] Sometimes it can be hard to spot this. A tell-tale sign, is to see if there is a common angle. If you can see that, this means that one of the conditions is there for the triangles to be '*similar*'.

'*Congruent*' triangles are also '*similar*'.

Scale factor = 1.

## Project Maths Notes<sup>TM</sup> for Leaving Cert

- It's an **investment** in the future of any young person
- Prepares you for the most difficult exam **questions**
- Sorts out **common problems** most students have
- Enables the learner to actually **understand** maths
- Download to your **smart device** - study **on the go**

**HIGHER /  
ORDINARY**
